

Semaglutide

Helps reduce appetite and control eating habits.

The Injection

Semaglutide is a revolutionary treatment that mimics the GLP-1 hormone, the key signal that tells us when we've had enough to eat. By slowing down gastric emptying and prompting increased insulin production, this innovative treatment offers an effective way to manage your appetite and take control of your eating habits.

The Benefits

- Decrease appetite
- Improve overall health
- Control eating habits
- Weight loss

The Clients

- Adults with weight related medical problems with BMI ≥ 27 .
- Clients who struggle everyday to lose weight.
- Clients who are committed to making weight management behavioral changes.
- People who meet the criteria based on consultation and lab work.

The Treatment Plan

- Reach out to Westwood IV Therapy to discuss if Semaglutide Treatment is right for you.
- Complete medical forms 2 days before your health evaluation and submit recent lab results.
- Meet with our Nurse Practitioner for health evaluation. (\$150 fee)
- Schedule weekly medication and weight management appointments as needed with our nurses.

Semaglutide Pricing:

- \$150 fee for intake and evaluation
- Month 1: \$300*
